CHALLENGE

To create a high-end learning facility including multiple, 120-student distance learning classrooms—fully equipped to deliver lectures to both local and remote students. Benefits include standardization of course instruction and conservation of resources, as a single professor can simultaneously address students in numerous locations.

SOLUTION

Video Installed traditional/electronic courseware with high-quality audio and imaging of video sources (computer, VCR, DVD, VTC, etc.), high-definition projection system with remote control touch panel (operated from custom instructor podium), display system including five large LCD monitors for “dual video” applications and transmission of instructor views, and pan/tilt/zoom cameras with IR sensors to ensure complete room coverage.

Also provided streaming capabilities for video teleconferencing, and an innovative, new application allowing IT personnel to resolve technical issues remotely with hand-held devices.

Audio Supplied high-quality audio system with digital signal processor for sound adjustments and echo cancellation, amplifier with power ceiling-mounted loudspeakers, wireless lavalier and podium-mounted microphones for instructor, and digital push-to-talk style microphone/speaker conference at the student stations for voice reinforcement.
